

NEW! AUTOMOWER® INSTALLATION KITS

Choose from Small, Medium or Large depending on your lawn installation requirements.

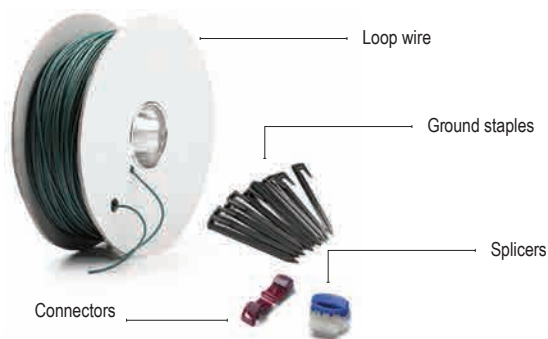

GENERAL INSTALLATION

The complexity and time of the installation will typically depend on overall size of the property and number of shrubs, trees, walkways and natural areas populating the yard. It is always considered a good idea to formulate an installation plan prior to beginning work to ensure a successful install.

Detailed installation instructions can be found within the Husqvarna Automower® Owner's Manual supplied with the product or online at husqvarna.com.

A continuous loop wire encloses the entire yard and connects to the Base Station.

The optional guide wire is recommended for quick return to the charging station through narrow passages or to assist the mower in navigating to remote areas.
